Gmail Email Forwarder is a very easy to use utility, which lets you forward all your email messages to another address.

This software helps you to easily forward your email messages and keeps your personal details safe. The interface of Gmail Email Forwarder is very simple. Q: Which organization should I choose for vba testing? I want to test my vba code on multiple computers. I have chosen two organizations that provide access to their labs to all students enrolled in their classes. I have created my first test and my first record. Is this correct? Should I be creating a test and a record for each of the computers I plan to test on? Should I be creating a record for each test? A: Create the test and the record once, and then run it on each computer.

In the Test Procedure sub (not under the ThisWorkbook module) put the logic for the record. If the logic varies between computers, put the logic in a module, and import that module using Workbook_Open(). An example: Sub Test() myVar = "" If InStr("ab", myVar) > 0 Then myVar = "not an ab" End If Debug.Print myVar End Sub Sub Test2() myVar = "baba" If InStr("ba", myVar) > 0 Then myVar = "bba" End If Debug.Print myVar End Sub myVar will be set to "ab" if it's true on a given computer. You might want to have a few
